

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims**

Original claims 1-8 and amended claims 1-6 (cancelled).

Claim 9 (new):       An orthopaedic device, in particular a prosthesis or an orthosis, for the purpose of replacing respectively supporting the function of at least one part of a human limb with a pivotable joint, for example a leg with a knee or an arm with an elbow, on either side of which joint there extend respective limb parts, such as a lower leg and an upper leg respectively a lower arm and an upper arm, which device comprises:

    a structure comprising two substantially rigid parts, for instance a rod, which parts are coupled to each other by means of hinge means and each comprise fastening means for optional temporary fastening to a limb part,

    wherein a pivot axis of the hinge means extends at least more or less in the region and in the direction of the pivot axis zone of the relevant joint,

    wherein the hinge means comprise two hinges, the respective pivot axes of which extend in directions which make an angle with each other of  $90^\circ \pm 40^\circ$ ;

    in that bounding means are present for limiting to a chosen angular position at least one of the pivoting movements of at least one of the hinges;

    and in that

    the fastening means comprise at least two divisible rings with adjustable periphery, one of which is connected to the one part and the other to the other part, and the bounding means comprise a flexible, tensively strong element, the ends of which are connected to these rings such that the flexible element can bound the pivoting movement of at least one hinge.

Claim 10 (new):       The device as claimed in claim 9, wherein the pivot axes are located spatially at a mutual distance, which distance is chosen such that it corresponds with the pivoting characteristics of the relevant joint and further wherein said respective pivot axes make an angle with each other of  $90^\circ \pm 20^\circ$ .

Claim 11 (new): The device as claimed in claim 9, wherein the bounding means comprise stop means added to a hinge.

Claim 12 (new): The device as claimed in claim 9, wherein said structure is provided on only one side with hinge means.

Claim 13 (new): The device as claimed in claim 9, wherein the device is a knee orthosis.

Claim 14 (new): The device as claimed in claim 9, wherein the device is a knee-ankle-foot orthosis.
